

MASTERING DATA AND FILE SHARING

Talk Data to Me Webinar
February 28, 2024

TALK DATA TO ME

CHALLENGES

When dealing with data management, there exist two distinct categories: unstructured and structured data. Unstructured data poses significant challenges for many organizations, characterized by disconnected silos, limited visibility and control over data, and frequent ransomware attacks. This type of data constitutes approximately 80% of the world's data and requires effective strategies to cope with its continuous and unpredictable growth.

HCP ANYWHERE ENTERPRISE

What is it?

Hitachi Content Platform Anywhere Enterprise (HCP Anywhere Enterprise) backed by CTERA's global file system technology offers government organizations a modern, cloud-based solution for unstructured data management that delivers full privacy and protection for sensitive and classified data.

Security

Deploy private file services that deliver the same resiliency, productivity, and elasticity as civilian cloud-based services, while meeting stringent military-grade data security requirements and mission-critical availability. The platform utilizes a zero-trust architecture, 100% on-premises deployment model, CAC enablement, read-only audit logs, and much more.

Cost Savings

The platform utilizes a capacity-based, subscription licensing model, offering the same pay-as-you-go pricing structure as hyperscale clouds. Additionally, customers have seen an 80% storage footprint reduction as intelligent caching reduces the amount of local storage required; an 80% savings compared to NAS and SAN by using object storage to reduce total cost of ownership; and a 65% reduction in storage required due to built-in compression and deduplication.

TAKEAWAYS

1. Demand a seamless edge-to-cloud integration strategy for your modern file workloads.
2. Demand zero trust architectures and a robust security posture for your edge and multi-cloud datasets.
3. The data explosion requires solutions that are scalable, flexible, and with automated deployment methods.
