TALK DATA TO ME

DEFINING DATA DISCOVERY

When it comes to defining Data Discovery, everyone seems to have their own take. Here is our definitions:

"... characterize it as a building, generating intelligence about the data, ultimately to answer a question" - Ajay Vohora

"... means better informed decisions... but those that are driven and drawn out by supporting data." - David Gagliano

"getting data from a lot of different places to see what story is telling you, and how you can use that to leverage that data for furthering your goals" - Adam Burstein

THINGS TO THINK ABOUT

1. Are you working in small increments and collaboratively?
2. What is the goal?
3. What is the point of the task in order to provide value to the organization?
4. What questions are you trying to answer?
